

PERFORATED PANEL DESIGN GUIDE

Wellington Architectural design guide is aimed to assist architects, builders and contractors to easily and cost-effictively tailor our perforated panel range to suit your project.

> **STEP 1** DETERMINE PANEL SIZE

STEP 2 DESIGN YOUR PERFORATION

STEP 1 DETERMINE PANEL SIZE

Determine the size of the panels required to suit your space. You may need a few different panel sizes depending on the panel layout and shape.

Tip: A standard panel size is 1200mm x 2400mm. To reduce wastage and keep costs down it is best to design the panels for your project based on a standard panel sizes with minimal offcuts.

For example: A floor to ceiling panel with 2400mm ceiling height can utilise the full panel height. However above a storage unit the required height would be less, and the off-cut could be used above a door opening.

STEP 2 DESIGN YOUR PERFORATION

Select a perforation from our design library or design your own. You can either cut out full shapes, etch shapes or a combination of perforations and etching.

Tip: Larger designs with curved lines (eg. no sharp edges or small details) will be more cost effective and have a shorter lead time.

Depending on your design you may also want to consider leaving a solid border around your design. Also consider how panels will look when placed next to each other and if your design repeats well.

Export your design as a .DXF file. This will ensure accuracy when we transfer your design to the machine.

Find more designs in our Perforated Panel Range guide.

STEP 3 MATERIAL AND COLOUR SELECTION

Select your material and colour from the range below.

Available materials include:

- Medium Density Fibreboard (MDF)
- Plywood
- Timber Veneer

You can also select a backing colour. As standard we use black fabric for all of our perforated panels however we can customise this to suit your project.

Colour swatches shown below are a guide only. Actual colours may vary from panel to panel.

Sapele

TIMBER VENEER

White Oak
